

# Gyromouse

## The Advanced Remote Mouse and Presentation Tool

## GO 2.4GHz Optical Air Mouse

The Gyromouse is an advanced wireless mouse that allows you to control your computer from anywhere in the room. You can use the Gyromouse on the desk (like a regular mouse) or, in the air from anywhere in the room (up to 50ft).

The Gyromouse also provides you with advanced presentation “special effects” that are sure to captivate your audience.

# Introducing the Gyromouse

The Gyromouse **Left** and **Right** mouse buttons work as regular mouse buttons.

The center **Scroll Wheel** will allow you to advance and reverse through your slides in your PowerPoint presentation.

The **Left** mouse button will advance the slides as well.

The “in-air” **activation trigger** (located on the bottom side) allows you to move your mouse pointer when you are using the mouse in the air.
