Consumer Outlook Index

Spring 2023 Results

Jones College of Business
Office of Consumer Research

Introduction

We're very excited to have you here! We hope you enjoy the Spring 2023 Tennessee Consumer Outlook Index results. Consumers from across Tennessee responded to the Jones College of Business Office of Consumer Research Consumer Outlook Survey, providing a unique perspective on the current and upcoming outlook of the economy and spending.

Consumers are uncertain about the near future economy

Tennessee consumers had become more pessimistic over the last several quarters, with positive sentiment declining to 16% (see Figure 1). This reflects a belief that the current conditions are still relatively bad, and consumers are uncertain about future economic conditions.

Figure 1. Positive sentiment is at an all-time low

Further, after being at an all-time low in the Fall of 2022, the Overall Outlook index hasn't begun a consistent recovery pattern (see Figure 2). While the current lows reflect poor views of the economy and pessimistic expectations for the future of the economy, the recent flattening may be signaling either the bottom of peak fear or a wait and see pattern as consumers wait for more economic news.

Figure 2. The Consumer Outlook Index signals uncertainty

Table 1 provides more context to the trend lines found in Figure 2. Over the past year, consumers’ willingness to spend money on large purchases has held relatively steady. Tennessee consumers appear to be in a wait-and-see pattern. Given that two-thirds of our national economy is from consumer spending, changes in consumers’ perceptions of the current economy, the future economy, and whether now is a good time to make large purchases can significantly affect future economic growth.

Table1. Current results and changes in the Consumer Outlook Index

	Current Results Spring 2023	Change from Winter 2023	Change from Fall 2022
Overall Outlook Index	-206	-14	50
Current Situation Index	-69	-25	-6
Future Expectations Index	-16	5	24
Purchasing Index	-120	6	33

Consumer Spending is Still Increasing

Changes in consumer spending, savings, and credit card debt are key indicators for predicting economic growth (see Figure 3). With wage increases lagging increases in the cost of goods and services, consumers are increasing their spending at the expense of their savings and through credit card debt.

Figure 3. Consumer spending is still increasing as the savings rate decreases

Consumer Spending, Savings, & Debt

Further, as shown in Figure 4, consumer perceptions concerning their financial situation has declined over the last quarter, with more respondents stating that their current situation is worse than a year ago (a change of +6%).

Figure 4. Tennessee consumer's view of their financial situation

Financial Situation: Winter 23

Financial Situation: Spring 23

Most consumers are worried about the economy

With higher prices, a fluctuating stock market, and personal worsening financial situation, more respondents are worried (64%) about the economy than they are optimistic (17%). Further, as shown in Figure 5, 24.3% of respondents indicated that their perception is the economy will go into a recession, 30.1% indicated the economy will continue to move in a slow decline, and 31.7% stated they expect the economy to be stagnant.

Figure 5. Tennessee consumer's level of concern on the future of the economy

Political approval ratings hold steady

Consumer ratings of political leaders handling of the economy remain relatively unchanged since our last survey. As shown in Figure 6, there is high disapproval of President Biden (49% strongly, 14.5% somewhat disapprove) and the U.S. Congress (39% strongly, 28% somewhat disapprove). Next, Governor Lee (14% strongly, 18% somewhat disapprove) and the Tennessee Congress (15% strongly, 17.5% somewhat disapprove) enjoy balanced ratings, with the highest number of respondents approving somewhat of their handling of the economy.

¹ The Consumer Outlook Index scores are based on consumers' responses to 11 questions measuring their perceptions of the current economy, the future economy, jobs, personal finances, and whether now is a good time to make large purchases. Four questions make up the Current Situation Index, four questions make up the Future Expectations Index, and three questions make up the Purchasing Index. The Overall Outlook Index is based on all 11 questions combined.

The scores for each index are computed by adding the percentage of favorable responses to each question and subtracting the percentage of negative responses to each question. A net score of zero indicates the percentage of consumers who hold negative views of the economy is equal to the percentage of consumers who hold positive views of the economy. A net positive score indicates consumers who hold positive views of the economy outnumber those who hold negative views of the economy (vice versa for a net negative score).
