# PHYS 4380 Quantum Mechanics I 

Homework Assignment 05
Due date: October 9, 2018
Instructor: Dr. Daniel Erenso
Name:

Mandatory problems: $1 \& 5$
Student signature: $\qquad$

Student Comment: $\qquad$
$\qquad$

| Problem \# | 1 | 2 | 3 | 4 | 5 | Score |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Score | $/$ | $/$ | $/$ | $/$ | $/$ | $/ 100$ |

1. Townsend 3.1, 3.8
2. Townsend 3.9
3. Townsend 3.10
4. Suppose we rotated the vector $\vec{A}=\left(A_{x}, A_{y}, A_{z}\right)$ by an angle $\varphi$ about the y -axis and found a new vector $\overrightarrow{A^{\prime}}=\left(A_{x}^{\prime}, A_{y}^{\prime}, A_{z}^{\prime}\right)$. The projection of the vector $\vec{A}$ on the x-z plane makes an angle $\theta$ from the positive z-axis (try to make 3D vectors visualization like the one in Fig.?? in my note). .Show that the rotation matrix is given by

$$
R(\varphi j)=\left[\begin{array}{ccc}
\cos (\varphi) & 0 & \sin (\varphi)  \tag{1}\\
0 & 1 & 0 \\
-\sin (\varphi) & 0 & \cos (\varphi)
\end{array}\right]
$$

5. Following the same approach we followed in class show that

$$
\left[\hat{J}_{z}, \hat{J}_{x}\right]=i \hbar \hat{J}_{y}
$$
