User Settings for BDMS

When you are on the Application List, you can select Edit and then User Settings
You can select the “Search/Result Set” navigation link to change the number of results that display. The default for “Limit Query Results Page Size” is 10, but 20 is a good setting to display more on the screen without having to scroll depending on your screen resolution.
On “Document View” you can uncheck the “Show Page Thumbnails” if you do not wish for the thumbnails to show down the left side. Showing thumbnails usually makes your screen slower to display results and seems to slow performance.
