SUMMER SCHOOL: Teaching the teachers

Math workshops adding up to new skill sets
by Randy Weiler
juweiler@mtsu.edu

Between the off-campus Foundation House next to Tennessee Miller Coliseum, Cantrell Hall in the Tom H. Jackson Building and venues in Knoxville, Chattanooga and Clarksville, secondary-school mathematics educators are honing their skills for the return to their classrooms this fall. Thirteen Master Teaching Fellows met June 14-18 at the Foundation House. Throughout the week, they reported on their Year 1 activities, which included teacher enhancement plans and action research plans, said Karen Case, assistant director and National Science Foundation grants coordinator for the Tennessee Math, Science

Institute helps instructors with pre-K licensing
by Tom Tozer
tozer@mtsu.edu

Approximately 35 kindergarten through eighth-grade teachers from across the state attended a weeklong intensive Pre-K Summer Institute at MTSU to obtain their endorsement to teach at the pre-K level. MTSU was first approached by the Tennessee Department of Education’s Office of Early Learning to offer the pre-K endorsement. Coordinated through the College of Education, key sessions focused on child development, curriculum and instruction, diversity and exception needs, family relationships and assessment.

“We consider it a privilege to offer training in early-childhood

Concrete, aerospace partner with Metro ‘academies’
by Randy Weiler
juweiler@mtsu.edu

MTSU’s nationally recognized Department of Aerospace and the Concrete Industry Management Program are among 82 groups partnering with Metro Nashville Public Schools for specialized career- and theme-based academies at 12 zoned high schools.
The plan was announced June 18 at the Pinnacle Building in downtown Nashville. McGavock High School will be home to The Academy of Aviation and Transportation. Adjunct aerospace faculty member Chris Carnett will serve as instructor, said Dr. Wayne Dornan, department chair. Dornan attended the event with Dr. Bill Badley, interim vice provost for academic affairs and director of general education.

Cane Ridge High School will house The Academy of Architecture and Construction. CIM alumna Samantha Summers Hart has accepted a teaching position with the academy and will be teaching the concrete portion, said Dr. Heather Brown, CIM director, who also attended the ceremony.

Along with the principals from McGavock and Cane Ridge, Dornan and Brown signed a pledge of support for their programs’ involvement. Both the CIM and aerospace academies will begin this fall. “We have already been active with them this spring as we had their students down for a half-day of lab activities,” Brown said.

“We are transplanting three of our CIM courses into dual-credit courses.”

The Academies of Nashville 2010: A Celebration of Current and Future Business-Education Partnerships is a collaboration of businesses, universities, community partners and others.Dornan and Badley said they credit Michelle Blackwell, director of the Office of Transfer Student Services, with laying the groundwork for MTSU’s role in the academies.

Camp ENRGY still going strong in second year

by Lisa L. Rollins
rollins@mtsu.edu

Although many physically disabled youths miss out on adaptive-recreation opportunities as part of their lifestyle, Camp ENRGY’s creators hope their summer-camp template will soon catch on.

Now in its second year, Camp ENRGY, which stands for Excellence ‘N’ Recreation and Games for Youth, is a weeklong camp designed and implemented by Dr. Don Morgan, director of the Center for Physical Activity and Health in Youth at MTSU, and two of his doctoral students, Sandy Stevens and Jenny Hutchens.

In August 2009, Morgan, along with camp co-directors Stevens and Hutchens and a handful of volunteers, led the inaugural Camp ENRGY as a free five-day camp for physically challenged youth ages 10 to 17. This year, the camp is back with an expanded participant age range (5 to 18) and an added emphasis on nutrition.

Set July 26-30 on the MTSU campus, Stevens said the camp’s registration roster filled quickly. Seven of this year’s participants are returning campers.

“The mission of the camp is to provide a positive experience for each child in a variety of activities,” she explained. “Our goal is to facilitate participation in lifelong physical activity, which improves their quality of life and reduces the burden on their disability. On a personal level, I want each child to leave with great memories of their time at camp.”

Like last year, the 2010 camp will include yoga, swimming, nature trails, dance, indoor soccer, martial arts and GPS-based activities as well as baseball, golf, strength/flexibility training and football.

Because a third of this year’s Camp ENRGY participants are second-year campers, organizers have worked hard to find new ways to engage the youngsters.

“To keep them interested, we are adding a variety of new activities,” Stevens confirmed. “For example, this year the campers will be able to participate in gymnastics, kayaking in the pool, playing Wii and hosting a touch-football game.”

Also among this summer’s activities will be a tried and true favorite: singing camp songs.

“One of our counselors this year is the son of a Grammy-winning songwriter (Marcus Hummon),” Stevens said. “He will be providing music at various times throughout the week. … Plus, we are hoping that we may even be able to have his father perform at our camp graduation event or maybe at the evening meal.”

Meanwhile, Morgan, a professor in the Department of Health and Human Performance, said that by sponsoring an activity camp for children with disabilities, he hopes MTSU’s CPATH will forge the way for others.

“We hope that this summer camp will become a template for other camps for physically challenged youth here in Tennessee and throughout the nation,” he said. “We also hope that we can raise awareness of the need for local recreation groups and organizations to provide meaningful activity and sports opportunities for these kids.”

Although registration for Camp ENRGY is currently full, organizers will accept names for a first-come, first-serve “standby” list. For more information, contact Morgan at dmorgan@mtsu.edu.
Mulraine takes reins of recording industry

by Gina E. Fann
ghanne@mtsu.edu

Dr. Loren Mulraine is ready for a fresh polish on one of MTSU’s crown jewels—the Department of Recording Industry. The longtime associate professor took on the chairman’s job July 1, replacing the retiring Chris Haseleu and already anticipating a challenging new academic year for the 33-year-old department.

“Our consensus has been that we don’t want to solely be reactive to the industry but to give thought to how we can lead the industry,” explains Mulraine, an entertainment law attorney who’s taught at MTSU since 1998 and served two stints as interim associate dean of the College of Mass Communication.

“It’s important that we find a way to steer the ship into uncharted territory, which is precisely where the industry is headed. We can expand and diversify our programs so we’re not just focusing on recording industry but entertainment, and that means music for film, TV and gaming … ”

“We have to continue to create opportunities for our students to be well-rounded. If we don’t put a good product on the street, we lose our credibility. When we started more than 30 years ago, we were unique. Now we have all sorts of competition.”

The department, which is the largest of its kind in the United States, boasts more than 1,200 majors and 28 full-time faculty members. It’s regularly expanded its course offerings and concentrations, creating partnerships within and outside MTSU to form programs like the Master of Fine Arts in Recording Arts and Technology and the commercial songwriting concentration, which has strategic alliances with the American Society of Composers, Authors and Producers. Faculty ties with industry professionals have led to classroom training by multiplatinum artists and producers, participation in international trade shows and even Grammy nominations for professors.

“The good news is that our students are well-prepared when they leave here. Wherever MTSU RIM students go, they shine,” notes Mulraine, a gospel artist and songwriter who also runs Ten 21 Entertainment, Inc., which includes recording, publishing, booking and artist-management divisions, and a consulting company, The Mulraine Firm, which handles legal issues.

“Taking the next steps will include expanding the department’s presence on Music Row, developing a greater online presence with more distance-learning courses and creating more industry partnerships to help maintain program quality in the wake of ongoing funding cuts.

“Our greatest challenge is finding a way to maintain and increase the quality of our students’ education in a world of diminished resources,” the new chairman says. “It’s never enough to stay where we were. We must continuously strive to get better.”

Get noticed in MTSU’s official university publication! Check out (and bookmark!) The Record’s 2010 deadline schedule at www.mtsu.edu/news/Record/deadlines.shtml.

Voices We Haven’t Heard

from Staff Reports
news@mtsu.edu

Experiences of confidence, faith, defiance, togetherness, satire and sobriety characterize the second edition of Voices We Haven’t Heard, a publication of MTSU’s June Anderson Center for Women and Nontraditional Students.

The latest Voices, available since July 1, is larger than last year’s edition and includes feminist poetry and prose complemented by photographs of students engaged in center activities.

Center Director Terri Johnson says the magazine empowers students by providing them with a creative outlet for their observations on racism, sexism, classism, homophobia and other forms of oppression.

For example, in “Ghetto Poetry,” sophomore Precious Creavalle anticipates the surprise her readers might feel in discovering that verbal talent can emerge from harsh conditions.

She writes, “Ebonics and old English all in one. /Yeah I was locked up, but only for a fortnight. /That’s right, broken English and Webster’s best/All in the same verse. /How else could I use a term like/Government sanctioned self-contained purgatory and /‘Hell Yeah’ in the same line?”

Brenda (Kidd) Navarro, a junior majoring in global studies and Spanish, overturns conventional thinking about womanhood and invites the readers to consider numerous possibilities in “Flesh, Mind, and Soul.”

Her poem states, “I am Mother Nature, Gaia is my name./A renegade bitch that’ll drive you insane./I’m loyal, confident, motivated, and rare/…. and when I walk by everyone stares./I am the truth that can set every man free./Masculine, Feminine, Androgynous—that’s me.”

The centerpiece of Voices is Lawrence Tumpag’s “O Brother, Where Art Thou?,” a chronicle of Tumpag’s struggles in defining manhood during a lifetime marked by encounters with some of the worst examples of manhood imaginable.

Of his hard-working single mother, the senior social-work major writes, “Interspersed throughout my childhood, she would come across men she hoped could be companions, caretakers, role models, father figure(s) …”

“(Un)fortunately, many of them would turn out to be individuals who took advantage of her assets (and) dreams to have a ‘whole or complete family,’ and finally one would use his own income to give a sense of financial security in exchange for subservience and dehumanization.”

For comic relief, Gina Logue of News and Public Affairs provides an essay on the relative absence of commercials for feminine-hygiene products on prime-time television compared to the overwhelming saturation campaigns for erectile-dysfunction drugs.

“The Viagra spots are so preposterously over the top that they almost make one yearn for the straightforward Bob Dole solicitations of yesteryear,” she writes. “Targeting the older demographic is fine; insulting their taste is not. Viagra commercials have all the class of an orange leisure suit, circa 1977.”

Voices We Haven’t Heard is free and is available from the June Anderson Center for Women and Nontraditional Students in its new home, Room 320 of the Keathley University Center. For more information, call 615-898-5989 or go to www.mtsu.edu/jac.

Institute

education to a group of dedicated teachers,” said Dr. Lana Seivers, education dean.

“The expertise and knowledge of the MTSU faculty further prepare these skilled professionals with developmentally appropriate curricula and information to use in their classrooms. Through endeavors such as the Pre-K Institute, Tennessee’s youngest learners will be given a foundation upon which to grow and develop.”

“This has been great, and in a one-week course we are getting all the information we need,” said Katie Dowis, who teaches in Alcoa, Tenn. “This will help me get my endorsement to become a pre-K teacher next year.”

Dowis will take the Praxis II Education of Young Children test in July, which all aspiring pre-K teachers must pass, along with meeting other criteria, before they earn licensure.

“I’ve always wanted my pre-K endorsement,” said Ruby Hunt from Huntingdon, Tenn. “This has been great, and in a one-week course we are getting all the information we need.”

I Employment Standards Training.

“I think it’s wonderful,” said Fran Ramsey, a Memphis City Schools teacher. “I’ve been going many years to workshops; this is the first time I did not want to leave early. It got more enjoyable every day. I learned an awful lot, and it was very well-organized.”

Larry Phillips of Page High School in Williamson County closed the June 14-18 session with a “Coach’s Casino.”

For teachers, Phillips said, learning is about “getting kids to do things and learn themselves, through a lab that’s interesting and fun, and be able to reach their own conclusions. They learn about probability and make decisions based on math.”

An earlier session was a mathematics partnership, UMath, for teachers in third through fifth grades. About 70 teachers attended sessions held in Murfreesboro, Chattanooga and Clarksville.

In all, about 150 teachers took part in the Algebra I training and UMath, she added.
InfoSearch eases access to library books, journals

by Gina K. Logue

Students using MTSU’s James E. Walker Library will see a big change when they log on to the library’s website.

The institution’s new search engine is now online, providing even more options and user-friendly access to resources for both on-campus students and distance learners at http://library.mtsu.edu.

Using federal stimulus funds, the library has replaced its Voyager search system, which has been in place for about 10 years, with Millennium software that the library has christened InfoSearch.

“IT looks a little bit more like modern-day Web interfaces,” says Electronic Resources Librarian Mary Ellen Pozzebon. “It doesn’t look as outdated as Voyager does.”

InfoSearch enables users to conduct basic searches by entering key-words without limiting the search to title or subject. Users also will be able to find out the resource’s location within the library and whether it has been checked out.

“IT looks a little bit more like modern-day Web interfaces,” says Electronic Resources Librarian Mary Ellen Pozzebon. “It doesn’t look as outdated as Voyager does.”

InfoSearch enables users to conduct basic searches by entering key-words without limiting the search to title or subject. Users also will be able to find out the resource’s location within the library and whether it has been checked out.

“The catalog will also include some, but not all, holdings from the Gore Center and the Center for Popular Music,” Pozzebon says. “It will include all the holdings from the (Howard) Music Library and the Instructional Media Resources Library, and, of course, all of the materials here.”

Systems Librarian David Robinson says the new system offers “a quick and intuitive search interface” with many new search tools, including content categories, tag clouds (which are hyperlinked words used to describe comments on sites), spell-checking, recently added materials suggestions and relevance ranking. The search engine even has a “Did you mean …?” feature.

Another advantage of InfoSearch over Voyager is access to Google previews. Patrons will be able to click on a picture of a book and read an overview of it before deciding whether it suits their needs.

“Book-cover art, table of contents, content summary and other features will be available,” Robinson says. “Users can add descriptive tags to books in the catalog and rate books on usefulness.”

“There’s a very robust user community that shares tips and tricks and adjustments that they’ve made,” adds Pozzebon. “We can borrow implementations that other libraries have done.”

A smart-phone-enabled interface will allow users to search the library catalog from a cell phone by pointing the phone’s browser to http://airpac.library2.mtsu.edu.

by Gina K. Logue

 Teachers fly higher at aerospace workshop

ADVENTURES IN EDUCATION—Field trips, speakers and hands-on projects highlight the 52nd annual Tennessee Aerospace Education Workshops for basic and advanced participants. In the photo below, area teachers build a balloon near the Student Health, Wellness and Recreation Center. At lower right, aerospace faculty member Terry Dorris, right, helps workshop participant David Perry, who is working on a master’s degree in aerospace education, prepare a rocket for blast-off. At right, all the hard work is a success as the participant-built balloon launches and flies! The teachers also flew in MTSU’s airplane fleet and heard other key presenters during their sessions.

Ag develops cool way to keep veggies fresher

by Randy Weiler
juweiler@mtsu.edu

MTSU’s School of Agribusiness and Agriscience has developed a cool way to make the MTSU Farm’s harvest of vegetables and fruits remain fresher longer.

Two 10-foot-by-10-foot air-conditioned walk-in packing sheds have been built on the approximately 450-acre farm property on Guy James Road, just off Halls Hill Pike east of campus.

With more crops being harvested, the packing sheds are holding more produce such as tomatoes, lettuce, onions and watermelons, keeping them cooler—and fresher—for this summer’s Student Farmers Market Fridays at the Horticulture Center.

Wheels began turning when Dr. Warren Gill, the department chair, worked with state Commissioner Ken Givens to secure $34,300 in state agriculture enhancement money. MTSU’s Office of Research and Sponsored Programs, then “matched it to help the student program and allowed us to sponsor student research,” Gill said.

Daniel Messick, president of the Plant and Soil Science Club, conceived a geothermal idea for the packing sheds, making it more ecologically friendly, Gill said. Messick and assistant professor Dr. Nate Phillips then collaborated on a $27,000 grant to make the project happen.

“I did a lot of research (about the geothermal method) and organized interviews (with prospective companies),” said Messick, a junior ag-science major and environmental science minor from Shelbyville. “Dr. Phillips and I came together on the proposal.”

“The student became the teacher” is how Gill summarizes Messick’s creative thinking.

“This is hands-on learning,” said Tim Redd, MTSU’s Farm Lab director. “This is a student lab, pure and simple.”

“It gives the students more access to experiential learning—what they’ll see in their future careers,” Phillips added.

The university contracted with Precision Air to build the packing sheds and provide the geothermal method, digging a 65-inch hole 300 feet into the ground adjacent to the facility housing the packing sheds. It brings a constant 55-degree temperature to the cooling units.

“It’s 70 percent more efficient and doubled the lifespan of the cooling unit,” Messick said.

“This has been a great experience. It’s nice to have a part in something that’s going to be here a long time. We have a more efficient way to sustain the cost on running the unit.”

Center for Popular Music names interim leader

Dale Cockrell is the interim director of the Center for Popular Music and will serve for one year while a search is under way for a new leader for the center, Dean Roy Moore of the College of Mass Communication has announced.

“Dr. Cockrell has a very distinguished academic, scholarly and professional record in popular music,” Moore said, adding that Cockrell is currently on a research leave from his post as professor of musicology at Vanderbilt University.

“I want to thank Dr. Loren Mulraine for serving the Center for Popular Music names interim leader the long time. We have a more efficient way to sustain the cost on running the unit.”

Adams Chair releases ‘Allied Health’ study for 2010

MTSU’s Adams Chair of Excellence in Health Care Services released the fourth edition of “Allied Health in Tennessee: A Supply and Demand Study” in June.

To view the study online, go to www.mtsu.edu/achcs/AlliedHealth.shtml.

The fourth edition includes national and local data as well, Chafin said, adding that it is called “the” source for allied health supply and demand information by academic institutions, employers and students.

“At the national level, the Bureau of Labor and Statistics Occupational Employment Projections to 2016 (from November 2007) indicate that jobs in health care and social assistance are expected to have the fastest rate of growth over the next 10 years, with the addition of a projected 4 million new wage and salary jobs, or 27 percent of all nonagricultural wage and salary jobs,” said Dr. Jo Edwards, Adams Chair of Excellence in Health Care Services and CHHS director.

“Jobs in health care are not going away,” Edwards added. “These statistics should capture the attention of students making career decisions, academicians and state and local governments. The publication addresses the many challenges associated with a changing health care landscape.”

TSU’s Adams Chair of Excellence in Tennessee: A Supply and Demand Study then “matched it to help the student program and allowed us to sponsor student research,” Gill said.

Daniel Messick, president of the Plant and Soil Science Club, conceived a geothermal idea for the packing sheds, making it more ecologically friendly, Gill said. Messick and assistant professor Dr. Nate Phillips then collaborated on a $27,000 grant to make the project happen.

“I did a lot of research (about the geothermal method) and organized interviews (with prospective companies),” said Messick, a junior ag-science major and environmental science minor from Shelbyville. “Dr. Phillips and I came together on the proposal.”

“The student became the teacher” is how Gill summarizes Messick’s creative thinking.

“This is hands-on learning,” said Tim Redd, MTSU’s Farm Lab director. “This is a student lab, pure and simple.”

“It gives the students more access to experiential learning—what they’ll see in their future careers,” Phillips added.

The university contracted with Precision Air to build the packing sheds and provide the geothermal method, digging a 65-inch hole 300 feet into the ground adjacent to the facility housing the packing sheds. It brings a constant 55-degree temperature to the cooling units.

“It’s 70 percent more efficient and doubled the lifespan of the cooling unit,” Messick said.

“This has been a great experience. It’s nice to have a part in something that’s going to be here a long time. We have a more efficient way to sustain the cost on running the unit.”

GOOD IDEA—MTSU agriculture-science major Daniel Messick, left, inspects the geothermal tubing in a trench near the new packing sheds at the MTSU Farm off Halls Hill Pike. Messick suggested the geothermal approach to keep the facility temperatures constant and ecologically friendly.

CHILLING OUT—Dr. Nate Phillips, left, and Dr. Warren Gill, right, join agriculture-science major Daniel Messick to inspect the new packing sheds at the MTSU Farm off Halls Hill Pike. Messick suggested that the sheds, which are used to keep produce fresh for the Student Farmers Market, use geothermal technology to keep temperatures consistent and remain ecologically friendly.
